

(Say **GEE, OH!** for better soil & plant health)

GEO:Solve™

GEO:Solve™ is...

Nature has it's own rapid repair system, but sometimes needs a kick-start. Geosorum's GEO:Solve is a proprietary blending of 70 trace minerals infused with beneficial humic and fulvic acids.

Trace minerals are essential for plant growth and development, as they help in the formation of enzymes and proteins. When mixed with water and applied to the soil and base of the plant, these minerals and acids organically invigorate the soil's natural processes for enriching itself, This occurs through aerobic soil respiration at the plant's root zone.

Humic and fulvic acids, on the other hand, are organic compounds that improve soil structure and fertility. They help in retaining moisture in the soil, reduce soil erosion and increase the soil's resistance to pests and diseases.

Through all this, the plants' nutrient uptake improves, resulting in healthier, more abundant crops which can mature sooner.

BENEFITS

TO THE GROWER

- Reduces water use
- Replaces or reduces synthetic inputs
- No calcium
- Lowers labor costs

TO THE SOIL

- Organic. No chemicals
- Invigorates the soil's natural processes for enriching itself

TO THE PLANT

- Motivates microbial and bacterial activity for healthier crops
- Speeds up crop maturity
- Increases the opportunity for additional harvests
- Enhances disease resistance
