

This is Peter, our National Sales Manager. He designed this boots-on-the-ground strategy to stay close to the soil and the growers.

## BENEFITS

### TO THE SOIL

- Organic: Replaces or reduces synthetic inputs
- Invigorates soil's natural processes for enriching itself
- No calcium

### TO THE PLANT

- Improves nutrient availability and storage, and photosynthesis
- Enhances nutrient uptake
- Increases stress tolerance
- Boosts growth and development
- Stomal enhancer
- Motivates microbial/bacterial activity in the soil for healthier crops
- Enhances disease resistance

### TO THE GROWER

- Fewer inputs
- Lowers labor costs
- Speeds up crop maturity
- Greater opportunity for additional hay harvests
- Increases drought tolerance
- Reduces water expense

## YOU TALK...

Hopefully about us and our proven, proprietary **GEO:Fix123** soil solution protocol.

We are Geosorum, a soil technology company, committed to naturally improving crops and eliminating chemicals from the soil, plants and people.

**Our goal? Prove to you that our protocol improves your soil, crops and your bottom line.**

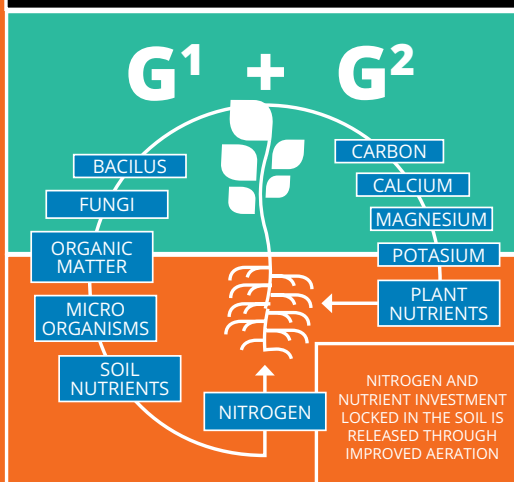

We know that you talk to your neighbors and fellow growers. Heck, even to your competitors. We count on that word of mouth. Our best salesperson is you, the farmer. We don't take that lightly.

**That's why we test, trial, and test again.**

We've been right down in the dirt with you, making sure the process is correct, and that our proprietary Geosorum GEO:Fix123 Protocol unlocks the nutritional investments in your soil... And?

**Crops as good if not better, organically, at lower cost, with no synthetic fertilizers.**

### GEOSERUM ORGANIC PROTOCOL

# "We all talk..."

We're counting on that.

**GEOSERUM**  
Bringing Soil To Life™

When Joe isn't in the lab, he's in the field explaining the magic of Geosorum's protocols and trial results...

Joe is also Geosorum's CEO and visionary.

### 1 GEO:BIOLOGIC™ is...

a proprietary blend of beneficial micro-organisms that promote active soil and plant health. Healthy plants can thrive on less water and produce higher yields, while experiencing increased natural immunity and establishing healthy, extensive root systems. This complements plant growth and development as well as allowing for delivery of essential trace elements.

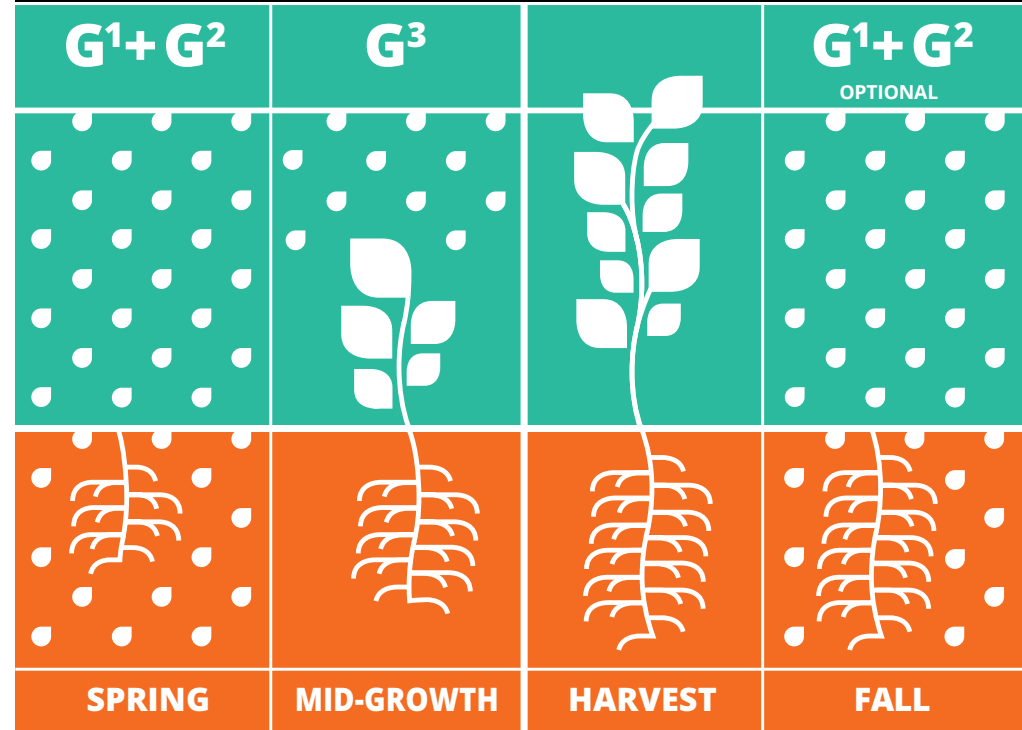

### 2 GEO:SOLVE™ is...

a blend of beneficial soil nutrients that promote plant health and help establish active soil. Healthy plants can thrive on less water, require less inputs, produce higher yields; all while experiencing increased natural immunity and newly established healthy, extensive root systems in revitalized soil.

### 3 GEO:FOLIAR™ is...

a spray containing naturally occurring magnesium chloride and trace minerals. Trials have shown increases in nutrient availability and photosynthesis, stress tolerance, nutrient uptake, natural immunity, plant growth and development, using essential trace minerals.

## GEO:Fix123 Protocol

Bacteria and microbes increase aerobic activity.

More nutrients are available, deeper in the root zone.

Nutrient uptake is increased, more rapidly, less water.

Crop yield may increase, and could be harvested sooner.

Measureable soil change in weeks, not months.

Soil activity during plant dormant period.

12.8 oz/ac.

4 lbs/ac.

1 qt/ac.

### NO MORE SYNTHETIC FERTILIZERS!

As part of your custom GEO:Fix123 Protocol, every year we will revisit your soil chemistry and biology. We will supply you with the correct organic inputs to re-balance your unique soil conditions.

At no cost.
